

testing::internal::bool_constant< false >

testing::internal::bool_constant< false >

testing::internal::IsRecursiveContainerImpl< C, true, false >

```
graph BT; A[testing::internal::IsRecursiveContainerImpl< C, true, false >] --> B[testing::internal::bool_constant< false >]; A --> C[testing::internal::bool_constant< false >];
```

The diagram illustrates the inheritance of the `bool_constant` trait from the `IsRecursiveContainerImpl` struct. A central box at the bottom, `testing::internal::IsRecursiveContainerImpl< C, true, false >`, has two arrows pointing upwards to two separate boxes at the top, both containing `testing::internal::bool_constant< false >`. This indicates that the `bool_constant` trait is derived from the `IsRecursiveContainerImpl` struct in two different contexts or instances.
